Assignment 4: Personal Web Application

Final Portfolio Website Presentation

Name: Mohammed Alfaraj

ID: 202323090

SWE363 - Web Engineering & Development

Project Overview & Motivation

- Final polished version of my portfolio website
- Combines features from Assignments 1, 2, and 3 into one complete application
- Designed to be responsive, interactive, and publicly accessible
- Created to showcase my skills, projects, and progress in web development
- Published live using GitHub Pages

Technical Demonstration

- Live demonstration of key features
- Technical architecture overview
- AI integration highlights

Key Features

- Dark and light mode with localStorage
- Project search, filter, and sort
- GitHub API integration
- Contact form validation and feedback
- Visitor name saving and site counter
- Back-to-top button and responsive layout

Technical Architecture

- HTML for structure
- CSS for styling and responsiveness
- JavaScript for interactivity and dynamic features
- GitHub API with fetch()
- GitHub Pages for live deployment

AI Use and Challenges

AI Use:

- ChatGPT for feature ideas, debugging, code review, and documentation help

Challenges:

- Debugging JavaScript issues
- Connecting and testing the GitHub API
- Making sure features worked correctly after deployment

Conclusion and Future Work

- Final polished version of my portfolio website
- Publicly deployed and ready to share

Future work:

- Add more project details or project pages
- Improve styling and animations further
- Continue updating the portfolio over time
